CONTEMPORARY DESIGN
FOR A NEW DESTINATION

www.enerzone-intl.com
When oil, gas, and coal are burned, the carbon they contain is oxidized to carbon dioxide (CO₂), the main greenhouse gas. In effect, the combustion of fossil fuels releases ancient carbon (carbon that has been buried within the earth for thousands of years), thereby increasing the atmospheric concentration of carbon dioxide (CO₂). In comparison, wood combustion can be considered carbon neutral because trees absorb CO₂ as they grow. This process is called carbon sequestration. Approximately one ton of carbon is sequestered for each cubic meter of wood. When trees mature, die, fall in the forest and decompose, the same amount of carbon is emitted as would be released if they were burned for heat. This cycle can be repeated forever without increasing atmospheric carbon. A healthy forest is not a museum, but a living community of plants and animals. When trees are used for energy, a part of the forests carbon “bank” is diverted from the natural decay and forest cycle into our homes to heat them. When we heat with wood, we are simply tapping into the natural carbon cycle in which CO₂ flows from the atmosphere to the forest and back. The key to ecologically sound and sustainable wood energy use is to ensure that the forest remains healthy, maintains a stable level of variously aged trees and provides a good habitat for a diversity of other species, both plants and animals. Ensuring there is a healthy fuelwood market is key to a sustainable forestry plan. Landowners have more incentive to remove low value trees and manage their forests sustainably knowing there is a market for this low value material.

The combustion of wood produces small particles that are called PM2.5. Those particles are 30 times smaller than a human hair. They can aggravate certain lung and heart diseases and have been linked with health problems such as asthma. Sources of PM2.5 include combustion under various forms, such as the one used for cars and trucks, wood heating, as well as other industrial processes. While it is true that old technology like open fireplaces and simple heaters could not burn the wood completely, the new generation of wood-burning appliances are designed to burn particles. They produce almost no visible smoke. The wood-heating industry has evolved. The vast majority of appliances sold on the market now meet the particles emissions limits set by the US Environmental Protection Agency as well as the Canadian standard CSA B415.1-10. For example, the Environmental Protection Agency, better known as EPA, limits emissions of certified wood heating appliances to no more than 2.5 grams per hour. In comparison, older conventional wood appliances average 40 grams per hour. Numerous countries, provinces and municipalities, have adopted laws that regulate the sale of wood heating appliances that do not meet the latest standards in terms of particles emissions. Among them, we can name the United States, Australia, New Zealand, as well as numerous countries that are part of the European Union. Now, all provinces and territories of Canada, except Nunavut, regulate the sale of wood-heating appliances.

Wood, when burned in an appliance that has been tested to the EPA or CSA B415.1-10 standards, emits up to 80% less particles. It is a clean, renewable energy source. Furthermore, the reduction in fuelwood consumption reaches up to 30% when advanced wood combustion systems are used. This is because certified wood appliances are 60% to 80% efficient, compared with 40% to 60% for conventional units. As for appliances burning wood pellets, they have amongst the lowest particulate emissions of all solid-fuel burning appliances. They are manufactured from waste products and other renewable resources right here in North America. They represent a huge source of heating fuel from material that would otherwise be sent to landfills.
Combine refinement and performance at all times, for personalized use and an ever-more accessible heating experience with the all-new Solution 1.7. This fully redesigned model will seduce you with its low ecological footprint at only 1.26 g/h, a rating well below the upcoming EPA requirements.

Medium-sized, the unit features sleek, elegant lines: side panels with delicate engraved grooves, a less massive arched iron door, a slightly curved top, a sturdy ash pan, and a customizable base with six choices of legs or a pedestal. Give meaning to your interior, give yourself the cozy nest you dream of!

FEATURES

➤ Recommended heating area: 500 to 1,800 sq. ft.
➤ Firebox volume: 1.9 cu. ft.
➤ Maximum heat output (dry cordwood): 65,000 BTU/h
➤ Maximum log length: 18”
➤ Exterior dimensions (pedestal): 24 7/8” W x 23 5/8” D x 30 1/8” H
➤ Combustion technology: Non-catalytic
➤ Included: Ash drawer with safety lid

See complete technical data on pages 10 and 11.

WOOD STOVE

SOLUTION 1.7

# EB00055

REQUARED COMPONENTS

Pedestal or three models of legs (available in black or brushed nickel cast iron)

OPTIONS

Firescreen
Air mate
130 CFM blower with variable speed control and thermodisc
Fresh air intake kit (5” diameter)
Insulated fresh air intake pipe
Fresh air intake register
The Solution 2.3 model produces average particulate emissions of 1.54 g/h and is EPA approved. It is often the choice of informed consumers who know the secrets of wood heating. Its firebox is 21 inches wide and 16.5 inches deep, so logs can be placed side-to-side or front-to-back. It has an ingenious door overlay system that allows you to choose between a black or brushed nickel finish. All other options - such as choice of legs or pedestal, variable speed 130 CFM fan and air mate - are also available. Although the firebox is roomy, Solution 2.3 boasts a balanced design that combines a decorative touch with serious heating power.

**FEATURES**

- Recommended heating area: 500 to 2,100 sq. ft.
- Firebox volume: 2.4 cu. ft.
- Maximum heat output (dry cordwood): 75,000 BTU/h
- Maximum log length: 20"
- Exterior dimensions (pedestal): 26” W x 25 7/8” D x 33 1/2” H
- Combustion technology: Non-catalytic
- Included: Ash drawer with safety lid

See complete technical data on pages 10 and 11.
Introduced on the market in 2018, the Harmony leaves no one indifferent with its look reminiscent of cast iron appliances, while offering the many advantages of wood stoves made of steel. The detail of the unique Fluted Roman Doric columns provides great elegance. Largely meeting EPA requirements with emissions below 1.54 g/h, the Harmony is an eco-friendly appliance that easily complies with the most stringent North American requirements. Available with a refined black or silver door trim, this unit becomes a serious choice to consider. Installation in a mobile home is allowed and you can add an air supply to the combustion to meet the requirements of domestic energy sources. Its 2.4 cu. ft. combustion chamber makes the Harmony a generous source of heat for your home that will certainly meet your highest expectations.

**FEATURES**

➤ Recommended heating area: 500 to 2,100 sq. ft.
➤ Firebox volume: 2.4 cu. ft.
➤ Maximum heat output (dry cordwood): 75,000 BTU/h
➤ Maximum log length: 20”
➤ Exterior dimensions: 25 3/4” W x 25 1/2” D x 30” H
➤ Combustion technology: Non-catalytic
➤ Included: Ash drawer with safety lid

See complete technical data on pages 10 and 11.
Once again, Enerzone designs and manufactures a superior quality heater to provide you with the independence and security you and your family are looking for. This brand new large ecological model will be soothing to the soul, especially in times of power failure, during cold seasons.

The **Solution 3.3** is equipped with side panels fitted with delicate engraved grooves and an arched cast iron door which beautifully highlights the flames. Choose from our pedestal or three leg models, black or brushed nickel, traditional, round or straight. You can also upgrade your appliance with a blower with thermodisc and a rigid firescreen for more comfort.

### FEATURES

- **Recommended heating area**: 900 to 2,300 sq. ft.
- **Firebox volume**: 3.3 cu. ft.
- **Maximum heat output** (dry cordwood): 90,000 BTU/h
- **Maximum log length**: 20”
- **Exterior dimensions** (pedestal): 24 1/4” W x 30 7/8” D x 33 3/8” H
- **Combustion technology**: Non-catalytic
- **Included**: Ash drawer with safety lid

See complete technical data on pages 10 and 11.
Combine refinement and performance at all times, for personalized use and an ever-more accessible heating experience with the all-new Solution 3.5. This fully redesigned model will seduce you with its low ecological footprint at only 1.32 g/h, a rating well below the upcoming EPA requirements.

This very large non-catalytic unit features sleek, elegant lines: slightly curved top, side panels with delicate engraved grooves and less massive arched iron door leaving plenty of room for the movements of the flames. Make sense of your home, give yourself the cozy nest you dream of!

FEATURES

➤ Recommended heating area: 1,000 to 2,700 sq. ft.
➤ Firebox volume: 3.5 cu. ft.
➤ Maximum heat output (dry cordwood): 110,000 BTU/h
➤ Maximum log length: 22”
➤ Exterior dimensions: 28 1/8” W x 33 1/2” D x 34 1/8” H
➤ Combustion technology: Non-catalytic
➤ Included: Ash drawer with safety lid and 130 CFM blower with variable speed control and thermodisc

See complete technical data on pages 10 and 11.

* Recommended heating area and maximum burn time may vary subject to location in home, chimney draft, heat loss factors, climate, fuel type and other variables. The recommended heated area for a given appliance is defined by the manufacturer as its capacity to maintain a minimum acceptable temperature in the designated area in case of a power failure.

** Fresh air intake kit required.

† Steel with a minimum thickness of 0.015" (0.38 mm) or ceramic tiles sealed together with grout. No protection is required if the unit is installed on a non-combustible floor (ex: concrete).

‡ The floor protection at the back of the stove is limited to the stove’s required clearance if such clearance is smaller than 8 inches (203 mm).
With energy and enthusiasm, the Enerzone team is once again innovating and living up to its reputation with the completely new Solution 1.7, which achieves incomparable performance of 1.26 g/h. This non-catalytic insert benefits from a state-of-the-art second combustion system.

The first-class materials, the arched cast iron door with delicate curves, the positioning of the silver grooves, the high density refractory bricks, the standard silent fan are all assets that make this unit an easy-to-operate insert that has this little extra. It gives its owner unparalleled comfort, increased durability and superior reliability.

A faceplate extension is included with this unit for installation in most hearths.

### FEATURES

- **Recommended heating area:** 500 to 1,800 sq. ft.
- **Firebox volume:** 1.9 cu. ft.
- **Maximum heat output (dry cordwood):** 65,000 BTU/h
- **Maximum log length:** 18”
- **Exterior dimensions (excluding faceplate):** 27 1/8” W x 22 3/8” D x 21 1/4” H
- **Minimum hearth dimensions (masonry opening):** 27 1/2” W x 12 3/4” D x 21 1/2” H
- **Combustion technology:** Non-catalytic
- **Included:** 144 CFM blower with variable speed control

See complete technical data on pages 17 and 18.
Designed to be a powerful unit, the **Solution 2.3** insert offers a surprising quality of combustion. Every detail is thoughtfully planned to optimize its performance, which far exceeds the latest industry standards.

Many of its features are identical to its freestanding counterpart. Strategically positioned, a powerful heat-activated fan (144 CFM) allows an optimal redistribution of the heat produced by the firebox in the room. In addition, its design allows it to receive a faceplate whose dimensions can cover a masonry hearth with a maximum height of 32 inches and width of 50 inches. In terms of style, the **Solution 2.3** allows the user to match the door overlay to the faceplate trims, which are available in black or brushed nickel plated finishes. Designed for those looking for an eco-friendly and efficient stove; the best of both worlds!

**A faceplate extension is included with this unit for installation in most hearths.**

### FEATURES

- Recommended heating area: 750 to 2,100 sq. ft.
- Firebox volume: 2.4 cu. ft.
- Maximum heat output (dry cordwood): 75,000 BTU/h
- Maximum log length: 20”
- Exterior dimensions (excluding faceplate): 28 3/8” W x 26 5/8” D x 23” H
- Minimum hearth dimensions (masonry opening): 28 7/8” W x 15 3/4” D x 23 5/16” H
- Combustion technology: Non-catalytic
- Included: 144 CFM blower with variable speed control

See complete technical data on pages 17 and 18.
When the winter season sets in, it also brings “cocooning” rituals. Designed to replace your old ineffective masonry fireplace, the Solution 3.5 is your best choice for creating the perfect ambiance. Comfort, performance, pleasure, economy and saving are at the core of your heating experience with this wood insert designed for large spaces, in addition to being very respectful of the environment.

Thanks to its new ultra-efficient and clean secondary combustion system, this non-catalytic appliance offers a dazzling spectacle as the flames roll between the logs, through the large glass surface.

Complete your installation with the faceplate and trims of your choice. A firescreen is also available for those who wish to fully experience the crackle of a good wood fire.

### FEATURES

- Recommended heating area: 1,000 to 2,700 sq. ft.
- Firebox volume: 3.5 cu. ft.
- Maximum heat output (dry cordwood): 110,000 BTU/h
- Maximum log length: 22”
- Exterior dimensions (excluding faceplate): 30 1/2” W x 29” D x 25 3/4” H
- Minimum hearth dimensions (masonry opening): 31” W x 18 3/8” D x 26 1/4” H
- Combustion technology: Non-catalytic

See complete technical data on pages 17 and 18.
The **Destination 2.3** is really a blend of technological improvement and design advancement. Cast iron was the material of choice for the smooth contemporary surround and designed for a flush finish designed to be installed in a masonry fireplace. An optional backing plate is available for larger masonry openings. Maintenance of electrical components was made easy with the conception of a slick, drawer-like system to which the blower assembly attaches. The heat activated blower assembly (90 CFM) can be operated in automatic, manual or OFF mode. Maintenance of electrical components was made easy with the conception of a slick, drawer-like system to which the blower assembly attaches. The blower assembly (90 CFM) is equipped with a heat sensor and a switch that can be set to automatic, manual or OFF position.

**FEATURES**

- Recommended heating area: 500 to 2,100 sq. ft.
- Firebox volume: 2.4 cu. ft.
- Maximum heat output (dry cordwood): 75,000 BTU/h
- Maximum log length: 20”
- Exterior dimensions (excluding faceplate): 28 3/8” W x 22 3/4” D x 23 3/8” H
- Minimum hearth dimensions (masonry opening): 28 7/8” W x 19 5/8” D x 23 3/4” H
- Combustion technology: Non-catalytic
- Included: 90 CFM blower with variable speed control

**OPTIONS**

- Firescreen
- Fresh air intake kit
- Insulated fresh air intake pipe
- Fresh air intake register
- Projection kit for insert (2” or 4”)
- Requires the optional faceplate backing plate for installation.
- Bottom faceplate backing plate panels 6” H x 44” W or 6” H x 50” W
- Faceplate backing plate panels 29” H x 44” W or 29” H x 50” W

See complete technical data on pages 17 and 18.
Enerzone invites you to a new experience in wood burning insert. Our design experts have created the best in uncompromising aesthetics and functionality. The Destination 2.7 stands out at first sight with its eloquent cast iron faceplate adorned with a distinctive louver and its large glass surface for an assertive, and distinguished style. Despite its large size, this tapered insert offers a very large viewing area, yet fits into many size restrictive masonry fireplaces. A cuttable faceplate, a fresh air intake and a fire screen door are available for further customization.

Equipped with incomparable performance, this insert offers 80,000 BTU/h with an emission rate of only 1.14 g/h; a value well below the next EPA standards. Require nothing less than an Enerzone appliance to enjoy precious moments of relaxation in the comfort of your home!

**FEATURES**

- Recommended heating area: 750 to 2,200 sq. ft.
- Firebox volume: 2.5 cu. ft.
- Maximum heat output (dry cordwood): 80,000 BTU/h
- Maximum log length: 20"
- Exterior dimensions (excluding faceplate): 30 3/4” W x 24 7/8” D x 26 1/8” H
- Minimum hearth dimensions (masonry opening): 31 3/4” W x 22 1/8” D x 27 1/8” H
- Included: 176 CFM blower with variable speed control

See complete technical data on pages 17 and 18.

The fireplace has always been the heart of the living room. A unifying element, to this day it is still one of the most coveted projects of previous generations as well as those to come.

Designed to fulfill your expectations, the **Solution 2.5 ZC II** clearly stands out from other fireplaces. Endowed with exceptional performance and efficiency that is far ahead of the competition. With the consumer for whom wood is a clean and renewable source of heating in mind, Enerzone designers created this non-catalytic unit that truly stands out. Experience wood heating in its most complete form.

**FEATURES**

* ➤ Recommended heating area: 750 to 2,200 sq. ft.
* ➤ Firebox volume: 2.5 cu. ft.
* ➤ Maximum heat output (dry cordwood): 80,000 BTU/h
* ➤ Maximum log length: 20”
* ➤ Exterior dimensions (excluding faceplate): 36 3/4” W x 23 7/8” D x 40 5/8” H
* ➤ Combustion technology: Non-catalytic
* ➤ Included: 176 CFM blower with variable speed control

See complete technical data on page 21.

**REQUIRED COMPONENTS**

Black faceplate
Rustic-style or traditional black cast-iron louvers

**OPTIONS**

Firescreen door
Fresh air intake register
Forced air kit
Hot air gravity kit - traditional or modern with adjustable pipes
Heat shield for surround/shelf

See complete technical data on page 21.
IT’S NOW TIME TO MANAGE HEAT DISTRIBUTION!

EPA certified wood fireplaces generate a lot of heat. For the most part, they generate too much for the room where they are located. Therefore, you need to manage the excess heat and send it where it is needed. To provide a solution, our research and development laboratory has designed the Heat Management System, an innovative technology that allows the recovery of the heat produced during combustion to redirect it into distribution ducts to heat other areas in your home.

**Forced air kit**

This system allows you to manage the heat distribution automatically. Using a wall thermostat, you can select the temperature you want to maintain in the room where the fireplace is located. Once the thermostat is satisfied, the excess heat is redirected to another room up to 50 feet (15 m) away from the fireplace using a 300 CFM blower. That way, you can enjoy a nice fire in your living room without the discomfort of excess heat generated by your Enerzone fireplace.

The system can also be used to supplement heat in a room remote from the fireplace. For this type of application, the thermostat needs to be positioned in the desired room and programmed with the temperature to be maintained. The system, now in "heat mode", will activate the blower as long as the temperature in the remote room is not achieved and that the fireplace has enough heat to distribute.

Enerzone also offers you another way to distribute excess heat into your home with the help of a hot air gravity kit

**Hot air gravity kit**

The hot air gravity kit allows you to bring hot air into the same room as the fireplace, in adjacent rooms, or up-stairs at a maximum distance of 10’ (3 m). The minimum height of the hot air duct must be 68” (1.7 m) measured from the base of the fireplace to the top of the hot air register.

For more details about the installation requirements of the forced air kit or the hot air gravity kit, visit www.enerzone-intl.com/en/service-support/heat-distribution-system.

Suggested installation: A) 300 CFM blower B) Hot air flexible pipe C) Hot air rigid pipe D) Air register. The information contained in this page is for information purposes only. For a detailed part list of kits content, please refer to the owner’s manuals.
**TECHNICAL DATA**

### Model Solution 2.5 ZC II

**Color** Metallic black

**Maximum burn time**

- 8 hours

**Combustion technology** Non-catalytic

**Maximum recommended heating area**

- 750 to 2,200 sq. ft.

**Overall heat output rate (min. to max.)**

- 14,200 BTU/h to 48,200 BTU/h

**Maximum heat output (dry cordwood)**

- 80,000 BTU/h

**Optimum efficiency**

- 74%

**Average particulate emissions rate**

- 1.14 g/h

**Door opening dimensions (W x H)**

- 25 3/8” x 10 1/2”

**Firebox dimensions (W x D x H), behind andiron**

- 20 3/8” x 17 1/2” x 12 1/8”

**Firebox volume**

- 2.5 cu. ft.

**Glass viewing area (W x H)**

- 22 1/4” x 13 1/2”

**Door type** Double door with cast-iron frame

**Maximum log length**

- 20”

**Log positioning**

- East / West

**Flue spigot diameter**

- 6”

**Minimum chimney height (from the base of fireplace)**

- 15’

**Glass type**

- Ceramic glass

**Warranty**

- Lifetime, limited

**Test standard - Emissions / efficiency**

- EPA / CSA B415.1-10

**Test standard - Safety**

- As per ULC-S610, UL 127, NFPA 211 et CSA B365, applicable in Canada and in the USA

### Exterior dimensions and weight

- **Width**
  - 36 3/4”
- **Depth**
  - 23 7/8”
- **Height**
  - 40 5/8”
- **Weight**
  - 523 lb (237 kg)

### Clearances to combustible materials

- **Side wall**
  - 13”
- **Back wall**
  - 0”
- **Sides**
  - 0”
- **Floor**
  - 0”
- **Ceiling**
  - 80”
- **Shelf (from the base of fireplace)**
  - 58”
- **Side mantle**
  - 8”
- **Non-combustible surround (top)**
  - 0”
- **Non-combustible surround (sides)**
  - 0”

### Options and required components

- **Black faceplate** Included
- **Rustic-style or traditional style black cast-iron louvers** Included
- **Hot air gravity kit** (see page 20) Optional
- **Forced air kit (6”)** (see page 20) Optional
- **Firescreen door** Optional
- **Fresh air intake register** Optional
- **Heat shield for surround/shelf** Optional

**MAXIMUM RECOMMENDED HEATING AREA**

in square feet by climate zone
Contains four accessories: poker, broom, shovel and tongs. A nice option for those who want to camouflage tools for a more decorative look.

Height: 20” (51 cm)
Diameter: 7 1/2” (19 cm)
Made in France with exceptional craftsmanship.

Contains four accessories: poker, broom, shovel and tongs. A beautiful addition to your rustic decor, both for the cottage and at home, thanks to its forest relief.

Height: 20” (51 cm)
Diameter: 7 1/2” (19 cm)
Made in France with exceptional craftsmanship.

Contains four accessories: poker, broom, shovel and tongs. You will appreciate its futuristic look for a unique atmosphere.

Height: 20” (51 cm)
Diameter: 7 1/2” (19 cm)
Made in France with exceptional craftsmanship.

Contains four accessories: poker, broom, shovel and tongs. Its wooden base and steel structure gives it an industrial look, perfect for contemporary or rustic spaces.
Support height: 21 7/8” (53 cm)
Length: 9 1/2” (24 cm)
Depth: 4 3/4” (12 cm)
Made in France with exceptional craftsmanship.

Contains four instruments: poker, broom, shovel and scraper. The clean lines and combination of steel and wood construction make a strong contemporary design statement.

Height of accessories: 26 3/16” (66 cm)
Made in Canada with exceptional craftsmanship.

Contains four instruments: poker, broom, shovel and clamp. The clean lines and simplicity make a strong contemporary design statement.

Height of accessories: 19 1/2” (50 cm)
Made in France with exceptional craftsmanship.

Contains four instruments: poker, broom, shovel and clamp. The dramatic use of steel makes a strong contemporary design statement.

Height of accessories: 19 1/2” (50 cm)
Base diameter: 7 1/2” (19 cm)
Made in France with exceptional craftsmanship.

Made of high quality steel. Its integrated handles make handling easier. Two identical parts that intersect easily. Assembly and disassembly in seconds for compact storage.

Height: 15 1/4” (38 cm)
Length: 24 1/4” (61 cm)
Depth: 13” (33 cm)
Weight: 28 1/2 lb (13 kg)
Made in Canada with exceptional craftsmanship.
This light-colored tempered glass hearth pad is particularly resistant to shocks. This glass plate is a safe and durable choice for your fireplace and will add elegance to your decor. Its manufacture is precise and neat: polished edges and non-cutting corners.

Four sizes:
- 54" x 46 3/4" (AC02703)
- 44" x 36" (AC02704)
- 50" x 18" (AC02760)
- 70" x 20" (AC02761)

Thickness: 10 mm

*Check local codes for approved alternatives. Any installation must be done according to the data and drawings detailed in the owner’s manual.

CERTIFIED MODULAR HEAT SHIELD

Depth: 18” (457 cm)

Optional
Drawer for wood storage
Shovel & poker included
ENERZONE LIMITED LIFETIME WARRANTY

on SCHOTT ROBAX® Ceramic Glass

SCHOTT ROBAX® glass-ceramic panels combine high quality, thermal resistance, and one-of-a-kind material properties to offer pure fireside pleasure with an unobstructed and safe view of the fire. 95% made of quartz sand and two other natural raw materials, SCHOTT ROBAX® glass-ceramic panels boast extremely low thermal expansion. These panels are especially heat resistant and can withstand blazing short-term temperatures, as well as substantial temperature fluctuations and thermal shocks. Given their high IR transmission values, SCHOTT ROBAX® glass-ceramic panels also allow for the heat produced inside the firebox to be more efficiently transferred through the glass.

As the quality of the components of our appliances is a priority at Enerzone, we have chosen the SCHOTT ROBAX® solution for our appliances and offer a limited lifetime warranty on ceramic glass.
